

RAHUL KUMAR

Data Scientist

☎ +91-8603067351 ✉ rahulkumar108642@gmail.com 💻 www.linkedin.com/in/akhandjyotiraj

Summary

Data Scientist with strong foundations in Python, Java (DSA), and Machine Learning. Skilled in analyzing and visualizing data, building data-driven applications, and optimizing scalable web solutions. Passionate about solving complex problems and creating impactful products as a Full Stack Developer.

Skills

Programming & Querying: Python, Java (DSA), C, C++, SQL, Mongoose

Web Development: HTML, CSS, Bootstrap, JavaScript, React.js, Node.js, Express.js

Analytical Abilities: Data Analysis (EDA), Problem Solving, AI Thinking, Optimization, and Debugging

Cloud & Tools: AWS, Git, GitHub, REST APIs, Docker

Experience

Data Scientist & Full Stack Developer Intern

April 2023 – June 2025

AkhandJyoti Innovations (Remote)

Tools Used: Excel, SQL, Power BI

- Collected, cleaned, and analyzed large user datasets to uncover behavioral trends and improve data accuracy, enabling data-driven feature decisions across multiple web projects.
- Built machine learning models and interactive Power BI dashboards to visualize performance metrics and predict usage patterns—helping identify key engagement insights.
- Designed and deployed full-stack web applications (Icon Downloader, Airbnb Clone, Resume Builder) using React, Node.js, and MongoDB, reducing response time by 40% and ensuring scalable, cloud-based performance.
- Collaborated with 4 developer and 2 senior managers to define and validate 6 APIs.

Projects

Airbnb Web Application | React.js, Node.js, Express, MongoDB, AWS

March 2025 – April 2025

- Developed a full-stack Airbnb-style booking platform enabling users to list, search, and reserve stays with real-time availability and secure authentication.
- Built RESTful APIs with Node.js and Express, and integrated MongoDB for dynamic data storage and retrieval.
- Designed a responsive React.js front-end improving user experience and load performance by 30%.
- Deployed the application on AWS with Git-based CI/CD workflows, ensuring high scalability and continuous uptime.

Customer Churn Prediction Model | Python, Pandas, Scikit-learn, Power BI

January 2025 – March 2025

- Processed and standardized a telecom dataset of over 7,000 customer records using Pandas, handling missing values and outliers for clean, analysis-ready data.
- Engineered new predictive features such as tenure bands and contract type groups to improve model accuracy and interpretability.
- Trained and evaluated multiple machine learning models, achieving 87% accuracy in churn prediction.
- Visualized churn trends and customer retention insights in Power BI, helping stakeholders identify at-risk customers and optimize retention campaigns.

Awards & Certifications

- **Google AI & ML Certification (2025):** Earned certification in Generative AI, TensorFlow, and Model Optimization, with applied projects improving prediction accuracy by 15%–20%.
- **Solved 200+ DSA problems on LeetCode (2024-25):** Strengthened expertise from basize to advanced levels in query optimization, algorithm design, and problem-solving.
- **Best Final Year Project – 2025, Galgotias University:** Built a machine learning model using Python and NLP to analyze over 10,000 customer reviews performance across 6 departments over 3 years.

Education

B.Tech in Specilization in Data Scince

Graduated: 2027

Galgotias University, Grater Noida

CGPA: 5.2 / 10
